Hi Folks,

i have the following issue already discussed on Fedora, however, with no usable outcome. Basically, everything works more or less fine with oneAPI but I experienced issues with vtune.

The issue looks like this ...

```
[WARNING] yaksa: 44 leaked handle pool objects
[WARNING] yaksa: 22 leaked handle pool objects
[WARNING] yaksa: 44 leaked handle pool objects
[WARNING] yaksa: 22 leaked handle pool objects
vtune: Error: [Instrumentation Engine]: Source/pin/injector_u/loadercommands.cpp: NotifyOnMiniloaderFailure:
689: Injector: caught unexpected signal 11 while running miniloader on
file /usr/bin/dash
vtune: Error: 0x4000002c (Invalid result directory) --
/home/aron/git/SweTools/regtests/hydstruct/durchlass_kreis_group_var/vtune.T470P
```

If I run with another analysis type e.g.

```
[WARNING] yaksa: 22 leaked handle pool objects
[WARNING] yaksa: 22 leaked handle pool objects
[WARNING] yaksa: 44 leaked handle pool objects
[WARNING] yaksa: 44 leaked handle pool objects
```

vtune: Warning: Cannot collect GPU hardware metrics due to a lack of permissions. Use root privileges (recommended) or re-configure your current permissions to make sure you are a member of the video user group and /proc/sys/dev/i915/perf_stream_paranoid value is set to 0.

Hi,

Thanks for posting in Intel Forums. I've tried running the Vtune matrix sample in fedora with multiple analysis and It worked fine without any errors. I'll provide you the steps to run matrix sample in fedora.

Step 1: Run the below commands in the home directory in fedora.

```
cd intel/oneapi
source setvars.sh
cd vtune/2021.3.0/samples/en/C++/matrix
```

Step 2: To run various analysis for matrix sample, use the following commands.

- Collecting Hotspots

```
vtune -collect hotspots ./matrix
```

- Performance snapshot

```
vtune -collect performance-snapshot ./matrix
```

- Hotspot collection (hardware event-based sampling) with non-default sampling interval 0.5 ms

```
vtune -collect hotspots -knob sampling-mode=hw -knob sampling-interval=0.5 ./matrix
```

- Generate the hotspots report for the 'r000hs' result directory:

```
vtune -report hotspots -r r000hs ./matrix
```

- Please provide result directory while running analysis using -r flag.

```
vtune -collect hotspots -r <path to result directory>
```

Could you please let us know what analysis type you're running? And Do you need CPU hotspots or GPU hotspots?

According to the second error, it shows that you don't have root permission to carry out the analysis. You either need to run with root privileges or add yourself to video group. (usermod -aG video <username>)

Thanks,

Alekhya

Hi,

Can you give us an update regarding this issue?

Thanks,

Alekhya

Hi,

We have not heard back from you, so we will close this inquiry now. If you need further assistance, please post a new question.

Thanks,

Alekhya

Hi Guys,

i have switched in the meanwhile to the following Linux release ...

Distributor ID: Ubuntu
Description: Ubuntu 21.04
Release: 21.04
Codename: hirsute

... and I have updated today 9/12/21 the oneApi as well as Vtune ...

Issue:

```
vtune: Error: [Instrumentation Engine]: Source/pin/injector_u/loadercommands.cpp: NotifyOnMiniloaderFailure:
689: Injector: caught unexpected signal 11 while running miniloader on file /usr/bin/dash
vtune: Error: Result path `/home/aron/git/SweTools/regtests/worms2/vtune.T490s/vtune.T490s.vtune' does not
exist.
```

I have attached the log output of the self-checker ...

Thanks in advance ...

Aron
